

A Utility Partner for

WATER EDUCATION

The City of Bothell Surface Water Division of Public Works offers several fun and exciting classroom presentations in local schools to help students explore the fascinating world of water. All presentations are tailored to our region and are offered free of charge. An experienced naturalist from Nature Vision, Inc., a company that spawned from the King County Nature Connection program, will conduct each class. This program was the recipient of the Environmental Education Association of Washington's Award of Excellence.

"The in-class presentation was excellent. It was just the right amount of "teacher-talk", interactive communication and activities. It was fast-paced and the kids were totally engaged."

-Teacher from Juanita Elementary School

"I really enjoyed both presentations we had this year. They tied in beautifully as the introductions to the science units we had planned. I especially enjoyed the fact that the kids were out using our own wetland area behind our school to examine the trees and wetland facets."

- Teacher from Peter Kirk Elementary School

"The Nature Vision class went extremely well. The students learned so much about the environment around us, and actually started to take care of the environment by asking parents to recycle and planning a neighborhood clean up day."

-Teacher from Enumclaw Schools

PROGRAMS OFFERED

Water Conservation (Grades 6-12)

Did you know that our area gets less rain than Miami? Join us for an interactive lesson that will explore what our society can do to conserve our water. Students will learn why we need to save water and what every citizen can do to save water wisely.

Water Supply (Grades 6-12)

Do you know where your water comes from? Discover where your local water originates and the path it takes to your faucet! Students will explore the human and natural factors that affect our water supply.

Water Connection Field Trip (Grades 6-12)

Classes visit a local water site (lake, stream, pond, or wetland) and are guided through the process of dipping and sorting aquatic bugs to test the water quality. Older students may also participate in further water quality studies by taking the water temperature, pH, and dissolved oxygen.
